The musical landscape, for the last few decades, has come under a sonic assault of distortion, sampling, screams, electronica, and volume. So much so that the underpinnings of melody, theme, and inspiration seem to be lost amidst a cacophony of noise. As with all trends, however, an underground movement of artists of all stripe is rising to reshape the next phase of American pop. One that sheds the techno-electric-digital plane for the roots, rhythms and sincerity of poetic composition and breath-taking performance. And the world is taking note, evidenced by the growing fame of John Maher, Sheryl Crow, Wilco and countless other folk-pop artists. The Rio Grande Valley, of deep South Texas, has given birth to one such group and, as the name suggests, they are like a refreshing cold glass of Mother Nature on a hot July night --- SUMMERMILK.
